

## The *complete* personal safety service

Skyguard offers a unique and comprehensive service to enhance the personal safety of anyone who works, travels or lives alone - wherever they are - enabling them to summon help at any time to their precise location.

### Our service combines three essential elements:

#### 1 Personal Safety Device

Skyguard's latest personal safety device is simple to use and combines precise satellite positioning with mobile cellular phone technology, along with an alarm to call for help, timer buttons, two pre-programmable phone numbers and many other features.

#### 2 Emergency Response Centre

Unique software at the Skyguard Emergency Response Centre gives professional operators the user's personal information and precise location, allows them to listen to the incident with two way voice communication and the ability to call in the appropriate emergency service if required.

#### 3 National Response Service

If an incident is outside the emergency services' remit for whatever reason, Skyguard provides an additional mobile response team of over 800 vehicles in the UK.

#### The Skyguard Service is designed:

- for the personal safety of anyone who works alone
- to assist employers to fulfil their legal duty of care to their lone workers.
